

MICROCEMENT MAINTENANCE

ClaudiCemento Microcement maintenance guidance

The following is recommended to enhance and extend the life of a microcement floor/walls.

- Shoes carry dirt and grit is abrasive to the floor's finish - using dirt-trapping doormats at each external entrance and where possible placing a mat on the inside as well will help to prevent premature wear and scratching.
- Regular sweeping with an anti-static dust control mop will remove damaging particles and protect the floor.
- High-heel shoes, especially worn ones, can dent any hard floor surface. Special care should be taken with shoes that have exposed heels with sharp points.
- Install protective, clear vinyl chair mats under any office chairs or castor wheels. Avoid plastic or castor wheel use directly on the surface of your floor.
- It is advisable not to use rubber mats as polyurethane finishes might have chemical reaction with certain materials in the rubber, such as antioxidants like butylated hydroxytoluene (BHT).
- Where Protector Dur Matt / Satin was used do not allow any standing waters to form, do not leave wet mops on the flooring (this does not apply to Protector DUR Epoxy which prevents water stains in wet rooms, kitchen worktops and areas at risk of standing waters etc)
- When moving heavy furniture or items back into position after the installation has been completed, rigid protective sheets on the surface of your floor should be used . Also avoid sliding or dragging furniture or appliances into place across the surface of the floor.
- Vacuum or sweep the floor regularly to remove grit or objects that may scratch the surface of the floor.
- We recommend the use of water and neutral soaps. Do not use abrasive cleaners, solvents, steam mops, steel wool, or scouring powder on your floor and never wax or polish your floor. Examples of products which can be used on a microcement flooring : Cleaner Pro 1L, Highly Concentrated Eco-Friendly Neutral Cleaner, or HG neutral cleaner for natural stone 5L - A neutral marble floor cleaner for the regular, thorough but safe cleaning of marble floors and other natural stone floors, or any other PH neutral cleaners available on the market.
